# Annual report data

in Eikon with Datastream

Students Manual

Utilizing the Eikon Terminal grants you access to financial statements of publicly traded companies. Eikon offers comprehensive timeframes for the companies within reach.

In Datastream, extracting values from financial statements is facilitated through the "Time Series" request, where identification of necessary financial instruments and variables is accomplished through the "Datatypes" bar. The selection of companies can be streamlined using the "Find Series" bar located above the Datatypes.
